DATE MAILED: 03/31/2004

Please find below and/or attached an Office communication concerning this application or proceeding.

<b>Office Action Summary</b>	<b>Application No.</b>	<b>Applicant(s)</b>
	09/866,478	TABUCHI, KUNIHIRO
	<b>Examiner</b>	<b>Art Unit</b>
	Cheryl N Hawkins	1734

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

#### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

#### Status

- 1) Responsive to communication(s) filed on 18 December 2003.
- 2a) This action is FINAL.                    2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

#### Disposition of Claims

- 4) Claim(s) 1-11 is/are pending in the application.
- 4a) Of the above claim(s) 1,2 and 9-11 is/are withdrawn from consideration.
- 5) Claim(s) \_\_\_\_\_ is/are allowed.
- 6) Claim(s) 3-8 is/are rejected.
- 7) Claim(s) 6 is/are objected to.
- 8) Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

#### Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on 29 May 2001 is/are: a) accepted or b) objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

#### Priority under 35 U.S.C. § 119

- 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) All    b) Some \* c) None of:
  1. Certified copies of the priority documents have been received.
  2. Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

#### Attachment(s)

## **DETAILED ACTION**

### ***Claim Objections***

1. Claim 6 is objected to because of the following informalities: “said anvil roller” in line 3 of the claim should be marked --an anvil roller-- and “the said running surface” in line 3 of the claim should be marked --a running surface--. Appropriate correction is required.

### ***Claim Rejections - 35 USC § 103***

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 3-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Majkrzak (US 6,294,038) in view of Voy et al. (US 5,351,426). Majkrzak discloses a label-pasting device (Figures 2a and 2b) comprising an adhesive applier (adhesive coating unit 118) for applying pressure-sensitive adhesive (column 14, line 45) to a label-material sheet composed of only label material (label material 104); a die cutter (die cutting application unit 124) for cutting out labels from the label-material sheet with a hot melt adhesive; and a label paster (vacuum transfer 128) for pasting the cut-out labels on a packing sheet (temporary carrier material 106).

As to Claim 3, Majkrzak discloses a label-pasting device wherein the adhesive applier applies pressure-sensitive adhesive, which is hot melt adhesive (column 14, line 45). Majkrzak

is silent as to the adhesive applier applying the pressure-sensitive adhesive to an area within the outline of, and smaller than, each cut portion of the sheet material to be cut out by the cutter. Voy et al. discloses problems regarding adhesive backed die-cut labels bonded to a carrier sheet and wound into a roll, which include the migration of adhesive beyond the peripheries of the labels which causes surfaces within the roll to stick together and interferes with dispensing the labels from the carrier sheet (column 3, line 63 through column 2, line 10). Voy et al. further discloses that the problems encountered by this adhesive migration can be prevented by utilizing an adhesive applicator (Figure 1, adhesive application station 34, adhesive applicator 41) to provide label material with adhesive zones which are inwardly spaced or recessed from the outer periphery of the labels to be die cut (Figure 5, label periphery 115, adhesive zone 105, adhesive zone periphery 106, labels 117); this careful placement of the adhesive zones also prevents the die cutting assembly from becoming jammed or fouled by contact with adhesive (column 10, lines 44-59). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the adhesive applicator of Majkrzak to apply adhesive to an area within the outline of, and smaller than, each cut portion of the sheet material to be cut out by the cutter such as that disclosed by Voy et al. to prevent problems concerning migration of the adhesive past the periphery of the label, as well as to prevent jamming the die cutting assembly with adhesive.

As to Claim 4, Majkrzak discloses a label-pasting device in which the adhesive applier and the die cutter are synchronized (Figure 2a and 2b; adhesive coating unit 118, die cutting application unit 124) and the adhesive applier applies pressure-sensitive adhesive, which is hot melt adhesive (column 14, line 45).

As to Claim 5, Majkrzak discloses a label-pasting device (Figures 2b) in which an anvil roller (vacuum transfer 128) constituting the die cutter serves as the label paster too; and the anvil roller is disposed so as to be rotatable in contact with a running surface of the packing sheet (temporary carrier material 106) and provided with a vacuum mechanism which sucks each cut-out label onto the periphery of the anvil roller unit the label is pasted on the packing sheet (column 14, lines 50-55).

4. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Majkrzak (US 6,294,038) and Voy et al. (US 5,351,426) as applied to claim 3 above, and further in view of Nash (US 5,674,345). The references as combined do not disclose a label-pasting device in which the label paster comprises a conveying belt disposed between an anvil roller and the top surface of a packaging sheet. Nash discloses a labeling apparatus which includes an anvil roller (Figure 1, anvil cylinder 21) which is separated from the running surface of an envelope and a conveying belt (Figure 1, transport mechanism 30) which is disposed between the anvil roller and the top surface of the envelope and carries each label received from the anvil roller in the running direction of the envelope to ensure that the labels stay in place until it is desired to remove them and place them onto envelopes, as well as to print desired indicia onto each label (column 4, lines 12-49). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the label paster of Majkrzak to include a conveying belt which is disposed between the anvil roller and the top surface of the packaging sheet as suggested by Nash to ensure that the labels stay in position with a desired spacing therebetween until their placement onto the packing sheet, as well as to print desired indicia onto each label.

Also, the references as combined do not disclose a labeling apparatus having a pressing belt for pressing each label. It is well known and conventional in the labeling apparatus art, as disclosed by Otruba (Figure 1, compression belt 34), to utilize a pressing belt to ensure intimate bonding between labels and the substrate to which the labels are being applied. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify the apparatus of the references as combined to include a pressing belt as suggested by Otruba which is disposed on the downstream side of the conveying belt to ensure intimate bonding between the labels and the packaging sheet.

***Allowable Subject Matter***

5. Claims 7 and 8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. The following is a statement of reasons for the indication of allowable subject matter: As to Claim 7, the prior art of record does not disclose or provide any motivation for one of ordinary skill in the art to modify the apparatus of Majkrzak to include a vacuum belt unit disposed on the exit side of the die cutter, the vacuum belt unit including a small-diameter roller disposed close to the exit of the die cutter; a large-diameter roller which is disposed so as to be in contact with the packing sheet and provided with a vacuum mechanism; and a vacuum belt which is laid around the small-diameter roller and the large-diameter roller and has many ventholes.

***Response to Arguments***

7. In response to the applicant's amendment to Claim 3, the objection of Claim 3 has been withdrawn.
  
8. Applicant's arguments with respect to claim 3 have been considered but are moot in view of the new ground(s) of rejection. The newly provided reference of Voy et al. discloses problems regarding adhesive backed die-cut labels bonded to a carrier sheet and wound into a roll, which include the migration of adhesive beyond the peripheries of the labels which causes surfaces within the roll to stick together and interferes with dispensing the labels from the carrier sheet (column 3, line 63 through column 2, line 10). Voy et al. further discloses that the problems encountered by this adhesive migration can be prevented by utilizing an adhesive applicator (Figure 1, adhesive application station 34, adhesive applicator 41) to provide label material with adhesive zones which are inwardly spaced or recessed from the outer periphery of the labels to be die cut (Figure 5, label periphery 115, adhesive zone 105, adhesive zone periphery 106, labels 117); this careful placement of the adhesive zones also prevents the die cutting assembly from becoming jammed or fouled by contact with adhesive (column 10, lines 44-59).

***Conclusion***

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Cheryl N Hawkins whose telephone number is (571) 272-1229. The examiner can normally be reached on 8:30am-5:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Richard Crispino can be reached on (517) 272-1226. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
